ALEX RIVERA

Software Development Engineer | Distributed Systems & Cloud

Seattle, WA • (555) 234-5678 • alex.rivera.dev@email.com • linkedin.com/in/alexrivera-dev • github.com/alexrivera

PROFESSIONAL SUMMARY

Results-oriented Software Engineer with a solid computer science foundation in data structures, algorithms, and object-oriented design. Hands-on experience developing highly scalable, distributed backend microservices using Java, Python, and AWS cloud infrastructure. Passionate about system performance, clean architecture, and end-to-end service ownership.

TECHNICAL SKILLS

- **Languages:** Java (Core Java, Spring Boot), Python, C++, Go, SQL
- **Cloud & Distributed Systems:** AWS (EC2, S3, DynamoDB, Lambda, SQS, SNS, CloudWatch), Docker, Microservices, Redis, Kafka
- **Core Competencies:** Data Structures & Algorithms, Object-Oriented Design (OOD), Multithreading, Distributed Systems, CI/CD
- **Tools & Practices:** Git, Linux, JUnit, Mockito, Jenkins, Terraform, RESTful APIs, Agile/Scrum, On-call Production Support

WORK EXPERIENCE

Associate Software Engineer | CloudScale Systems, Seattle, WA **July 2023 – Present**

- Engineered high-throughput RESTful microservices in Java (Spring Boot) and AWS Lambda, managing over 25M requests/day at 99.99% availability.
- Architected an event-driven decoupled pipeline utilizing AWS SQS and DynamoDB, cutting cross-service processing latency by 45%.
- Profiled database access patterns and introduced Redis distributed caching, lowering p99 response times from 380ms to 75ms.
- Developed comprehensive unit and integration test suites using JUnit 5 and Mockito, increasing automated test coverage from 65% to 91%.
- Owned operational metrics and observability dashboards with Amazon CloudWatch and Datadog, taking part in on-call tier-1 rotations.

Software Development Engineer Intern | Amazon Web Services (AWS), Seattle, WA **May 2022 – Aug 2022**

- Built a serverless telemetry ingestion service using AWS Lambda, S3, and DynamoDB for internal cloud fleet diagnostic metrics.
- Implemented dead-letter queue (DLQ) retry policies and idempotent consumer logic in Java, eliminating data drops during service failovers.
- Authored technical design documentation and conducted architectural code reviews with senior principal engineers.

PROJECTS

Distributed Key-Value Store (Java, Raft, gRPC, Docker)

- Implemented a fault-tolerant distributed storage cluster implementing the Raft consensus algorithm for leader election and log replication.
- Handled network partitions and concurrent client writes using multi-threaded socket communication and gRPC.

High-Throughput E-Commerce Checkout Engine (Python, FastAPI, PostgreSQL, Redis)

- Designed an ACID-compliant distributed checkout workflow with optimistic concurrency control and inventory locking.

EDUCATION

University of Washington, Seattle, WA • Bachelor of Science in Computer Science **Sep 2019 – Jun 2023** • GPA: 3.88/4.0

Relevant Coursework: Data Structures & Algorithms, Distributed Systems, Operating Systems, Computer Architecture, Database System Design.
